

Eliminate What Complicates Your Construction Projects

eznetpay® knows the construction industry. We've learned the ins and outs of managing construction projects and developed solutions for some of the most productivity-zapping and money-wasting challenges you face. Our patented, cloud-based software platform delivers critical automation tools that eliminate the redundancy and waste that complicate enterprise-level construction projects across industries like education, energy and healthcare.

Unlike other products on the market today, eznetpay is engineered for the project owner, but also with the goal of improving operational and contractual conditions for the contractor. eznetpay gives you complete ownership of and insight into the payment and administrative components of your project.

ENGINEERING FINANCIAL EFFICIENCIES

Simplify Construction Projects with eznetpay

APPROVALS AND UPDATES AT YOUR FINGERTIPS

eznetpay brings significantly improved documentation management to an otherwise chaotic stage of the construction process with its ability to automate the payment-approval process. Plus, all supporting documentation can be uploaded and stored within the system—either within the project document repository or at the schedule of value (SOV) line-item level—and easily retrieved when needed.

TRANSFER MONEY IN DAYS, NOT MONTHS

High-dollar transactions are quickly and securely processed once approval documentation has been received from each party. Electronic payment is sent directly to the payee's bank account using the ACH network, resulting in fewer visits and calls to your office from your contractors. Both the payer and the payee receive emails confirming the transfer of funds.

INSTANT EXCHANGE OF PAYMENT FOR LIEN WAIVER RELEASE

The eznetpay platform reduces the documentation, risks and costs associated with the paper-based lien waiver process. eznetpay's patented process allows for the simultaneous and instantaneous electronic exchange of lien waivers for payment, removing the barriers to prompt payment this manual exchange can sometimes create.

MANAGE RETAINAGE

eznetpay's robust, patented online retainage feature allows you the flexibility to design and execute complex retainage formulas to include options like applying effective ranges, choosing to tie retainage to the SOV line-item level, applying retainage to change orders, and performing the early and partial release of retainage. eznetpay also provides a claim-hold feature that can protect your interests in the event of a claim. A few simple clicks allow you to set the claims-on-file amounts including payment-hold and incomplete-work multipliers—enabling you to cover anticipated costs to correct an issue.

AUTOMATE THE MATERIALS-STORED PROCESS

Our patented, online materials-stored procedures operate like a mini accounting program, managing and tracking the flow of documentation and materials between the contractor and the project owner. You now have complete insight into new materials stored, presently stored materials, and previously stored materials used. This eliminates accidental double-billing and accounts for the correct payment to the contractor within a short amount of time.

REAL-TIME REPORTING OF ACTIVITY ACROSS ALL PROJECTS

The eznetpay platform gives you real-time status updates on activities across all projects. You can easily pull up everything from detailed contract profiles that allow for accurate online tracking of contract requirements and fulfillment to individual payment applications.

TRAINING DESIGNED FOR YOUR SCHEDULE

In addition to live support, we offer on-demand self-tutorials you can access 24/7. Plus, our platform is highly automated and intuitive to begin with.

SIMPLIFY YOUR CONSTRUCTION PROJECTS NOW

Every day you work without eznetpay, you are losing opportunities to save money and work more efficiently. Call us at 877-677-3711 or email us at sales@eznetpay.com. We'll make sure you're up and running and saving money as soon as possible.
